## Waiter Station Counter. WS-Counter\_750.

- ▶ This two-part counter WS-0750 can be supplied either as a built-in unit or, fitted with a stainless steel front base plate, as a free-standing counter. Both models comply fully with the Federal German Hygiene Regulation (DIN 18865 H3) and the American USPH guidelines.
- ▶ Material: Stainless steel 1.4301 or 1.4571, brushed (240 grain)
- ▶ Thickness: Body 1,5 mm, front skin 1,25 mm
- ▶ The WS-Counter-0750 can be used as a rubbish sorting facility in restaurants, bars or kitchens, either with or without refrigeration, as required.
- ▶ The door to the lower sanitary area opens horizontally to reveal a refuse container whereas the upper door opens vertically and slides simultaneously into the counter. The lower door is fitted with a retaining device to prevent accidental opening. Both doors are easily removable for cleaning.
- ▶ The WS-Counter-0750 is fitted with a U-shaped contiguous trim front cover.
- ▶ The corners of the sanitary compartment are rounded to a 10 mm radius to facilitate easy and thorough cleaning. All doors are equipped with shock absorbers as standard fittings to reduce noise emission.
- ▶ The rubbish bin (a plastic container) fits in a stainless steel bar frame welded to the lower door.
- ▶ The stainless steel hinges (60 mm long, pin diameter 6 mm) are continuously welded on both sides.
- ▶ To save weight the counter is produced without side panelling. Because of the special manufacturing method used the WS-Counter -0750 is very simple to handle.
- ▶ In order to minimize the risk of foot injuries in the workplace the base plate of both the unit built-in and the free-standing models is set back 80 mm.
- ▶ On installation the gap between two adjacent counters amounts to less than 1 mm.
- ▶ You are interested or have questions about the product? Then please get in touch with us; we are only too pleased to help.
